

Increased efficiency through workflow automation at Big Image Australia

Background

Big Image Australia is a large format digital printer dedicated to serving the Australian graphics industry as a trade only supplier. The company offers a wide range of large format print products from dye sublimated flags and fabric displays, to PVC banners, mesh, adhesive stickers, wall coverings and much more. The production takes place in a 1500 sqm facility. Machines from HP and Fujifilm, among others, are used for this purpose.

“OneVision has allowed us to process files faster and more accurately than ever. We have only just scratched the surface of what is possible.”

Deon Capogreco, Managing Director

Challenges

- Files are delivered via client email and FTP, Dropbox or physically, requiring prepress staff to manually open files to check for issues
- Majority of the preflight and file processing was manual
- A physical proof was printed and sent to production
- Manual nesting and setup of cut files by the print operators
- Lack of connectivity to production devices

Solutions

- ✔ Workflow now runs with a drop folder system to automatically resolve issues
- ✔ Reduction of lead time thanks to automation of preflight and file processing
- ✔ Faster response time for the creation of a proof for the client
- ✔ Automatic nesting and cut line management
- ✔ Direct connection to the diverse system landscape

BENEFITS

SEAMLESS INTEGRATION
OF ALL SYSTEMS INVOLVED

INCREASED EFFICIENCY DUE TO
AUTOMATED **FILE PROCESSING**

INTELLIGENT NESTING
WITHOUT MANUAL INTERVENTION

SMOOTH RUNNING
END-TO-END WORKFLOW

**READY TO AUTOMATE YOUR
PRODUCTION PROCESSES?**
